

Get your Septic Tank
working properly with...

a Natural Solution and
save some time and
money

ecobug® - Septic Tank Conditioner

"I have used ecobug® Septic Tank conditioner for the past seven years and we have not had to have our septic tank emptied throughout that time. We have not used bleach into our drain system and have recently started using the ecobug® High Performance Washroom Cleaner"

a happy householder

When functioning properly, house hold wastes are collected in your septic tank and then broken down, liquefied, and deodorised by the naturally occurring bacteria.

A properly working septic tank should never have to be emptied but because this process is biological, it is easily upset and may stop working. Some common factors that often upset the natural process are:

Overuse of disinfectants : Overuse of bleaches : Overuse of detergent

Such factors kill the micro-organisms that work to keep your septic system running properly. Because modern septic tanks are water-tight boxes, the naturally occurring bacteria in the surrounding soil are unable to enter.

ecobug® Septic Tank Conditioner...

...is specifically designed to replenish and boost the supply of these invaluable micro-organisms and allows natural activity to continue.

BENEFITS of ecobug® - Septic Tank Conditioner System

- ✓ Extends Life of Drain Area
- ✓ Controls Methane Production
- ✓ Improves Drain Field Percolation
